About Smith Interconnect

Smiths Interconnect is a leading provider of technically differentiated electronic components, subsystems, microwave and radio frequency products that connect, protect and control critical applications in the Defence and Aerospace, Communications and Industrial markets.

Our technology brands (EMC, Hypertac, IDI, Lorch, Millitech, Reflex Photonics, RF Labs, Sabritec, TECOM, TRAK and HSI) are synonymous with exceptional performance in technologically advanced, high quality solutions required for a high degree of safety and durability. Our extensive product portfolio includes high reliability electrical connectors and cable assemblies, solutions for antenna systems, and a wide range of innovative RF and microwave solutions.

Smiths Interconnect is part of Smiths Group plc, a global leader in applying advanced technologies for markets in threat and contraband detection, energy, medical devices, communications and engineered components. Smiths Group employs around 22,000 people in more than 50 countries.

Your global partner for innovative connectivity solutions

INDUSTRIAL

COMMUNICATIONS

DEFENCE & AEROSPACE

We Offer

Technical excellence and broad market experience

A comprehensive product portfolio providing customers with a single point of supply across multiple markets

Advanced engineered solutions integrating the combined expertise of our technology brands to create value for our customers

Optimised quality through first-class materials, state-of-the-art development practices, and world class talent

Robust financial pedigree and reputable heritage of Smiths Group

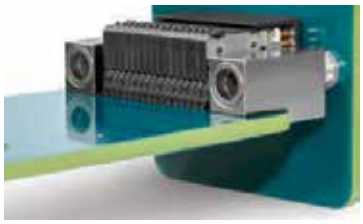
Technology Brands

EMC

High Reliability RF/Microwave Resistive & Signal Distribution Components

Board-level components incorporating advanced resistive and signal distribution technologies for a broad range of frequency spectrum applications. Extensive portfolio of RF devices used to attenuate, level, or terminate signals available in a variety of packages and footprints.

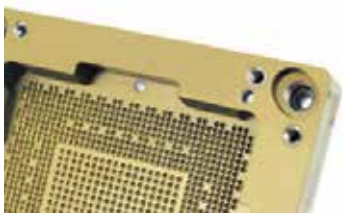
HYPERTAC



Superior Performing Electrical Connectors for the Most Demanding Applications

Premium interconnect solutions for electrical and electronic applications requiring optimised quality, performance, and reliability. Utilising the original Hypertac hyperboloid contact technology to achieve high performance in harsh environments and safety critical applications.

IDI



High Density Interconnect & Semiconductor Test Solutions with Spring Probe Technology

World's most comprehensive offering of spring probe based solutions, including: contacts, connectors, interposers, semiconductor test sockets, and ATE interfaces. Proven off-the-shelf and custom products deliver the best solution for the customer's specific application.

LORCH

RF/Microwave Conditioning Products with High Selectivity Using Multiple Topologies

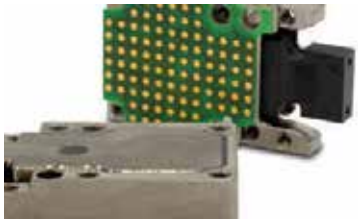
Innovative solutions for the electronics and communications industries. Ranging from high performance wireless and RF products to micro-miniature, cavity, discrete, waveguide, tunable, ceramic, and tubular filters and integrated assemblies.

MILLITECH

Leader in Millimeter-Wave Technology & Product Solutions

Specialising in the engineering, manufacturing, and testing of millimeter-wave components, assemblies, and fully integrated subsystems for space, SATCOM, test and measurement, radar, and scientific applications.

REFLEX PHOTONICS



Developer of Rugged, High Speed Optical Transceiver Modules & Parallel Embedded Optics Products

Embedded transceivers and transmit/receive modules for advanced interconnect-based solutions. Targeting high data rate interconnects where ruggedness and radiation resistance are required for defence, space, commercial aerospace and industrial applications.

RF LABS

High Frequency Microwave Cable Assemblies & Coaxial Components

High performance microwave cable assemblies and coaxial components supporting high performance operations, application- specific premium interconnects for high durability and harsh environments.

SABRITEC

High Speed Data and Transient Protection Interconnect Solutions

High speed quadrax, twinax, fibre optic, filter, coax and triax connectors, contacts and cable assemblies. Custom multi-pin circular, D-Sub rack and panel connectors and MIL-Spec interface type products.

TECOM

Advanced Antenna Systems & Solutions for RF/ Microwave Applications

Industry leading innovator of antennas and positioning systems for SATCOM in-flight connectivity, instrumentation, datalink, command & control, and telemetry applications integrated into the world's most advanced commercial and military platforms.

TRAK

High Reliability RF/Microwave Subsystems & Components

High reliability multi-function RF systems, ferrite microwave products, and precision time & frequency systems for defence, commercial aerospace, space, homeland security, and public safety applications.

HSI

High Reliability Connectors for Commercial Aerospace & Railway

Joint venture with Sichuan Huafeng Enterprise Group Co. Ltd, one of the major manufacturers of electronic components in China. Industry-leading connectivity solutions for commercial aerospace and railway markets in mainland China.

Synonymous with exceptional performance, safety and durability

Table of Contents

Microwave Components

Notes

Features

- Frequency Ranges from DC to 50 GHz
- Attenuation Values from 1 to 10 dB
- Negative and Positive Temperature Coefficients of Attenuation (TCA) Available
- Power Handling Up to 2 Watts
- Space and Military Qualified
- Surface Mount Packaging
- Wire Bondable Connections Available
- Impedance 50 and 75 Ohms
- RoHS Compliant Option Available

Benefits

- Small Footprint
- Zero Distortion
- Totally Passive
- Power Handling up to 2 Watts
- Several Metallization Options Available
- Tailored Response to Variations Over Temperature
- Requires no DC power.

Applications

- Power Amplifiers
- Military
- Mixers
- Satellite Communication
- Gain Blocks
- MMIC Amplifiers
- Directional Couplers
- Diode Detectors
- Broadcast (TV and Radio)

The Thermopad® is a totally passive, surface mountable temperature variable attenuator. It requires no bias or control voltages and does not generate signal distortion. The Thermopad can be used in place of a standard chip attenuator to combine level setting and temperature compensation in a single chip design. This will reduce component count, increase reliability, and lower system costs.

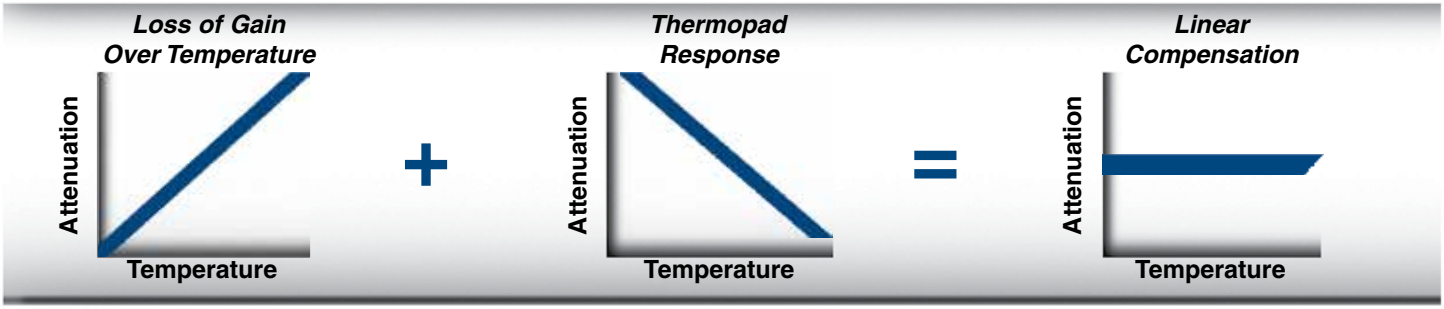
Thermopad® Family

General Specifications

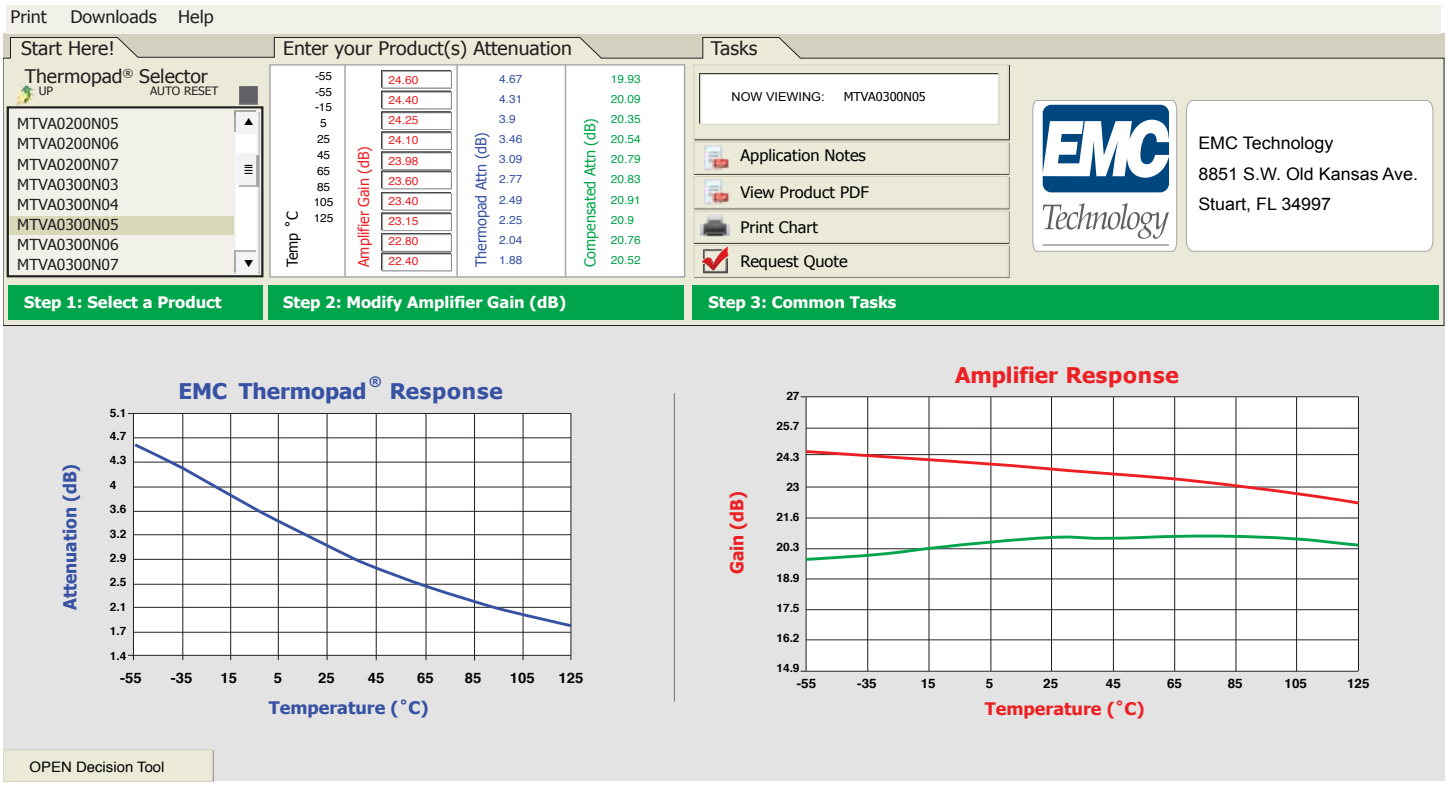


- Small Footprint
- Surface Mountable
- Contributes No Signal Distortion
- Totally Passive
- Power Handling up to 2 Watts
- Several Metallization and Packaging Options Available
- Tailored Response to Cancel Amplifier Gain Variations Over Temperature
- Requires no DC Power

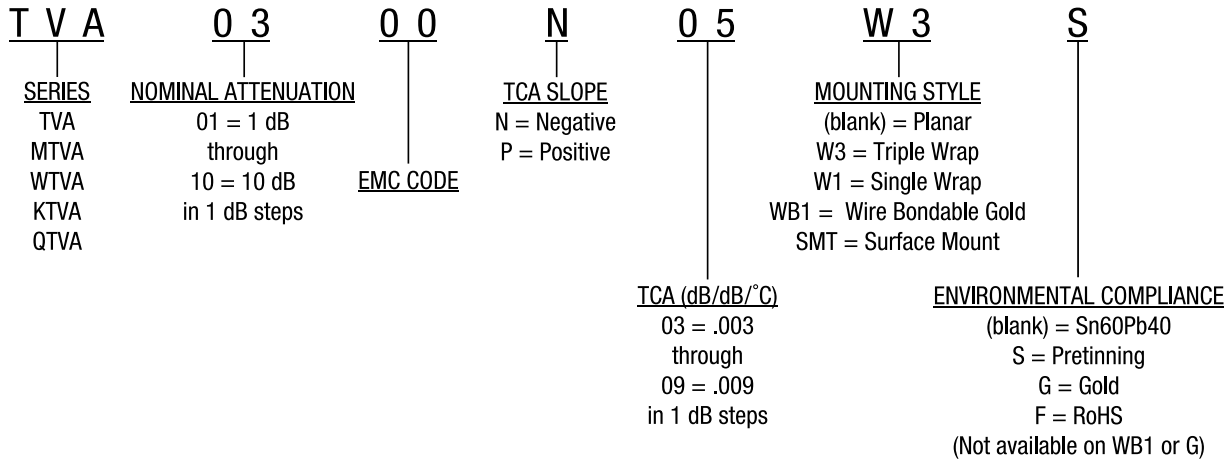
The Thermopad® is a totally passive absorptive microwave attenuator, which provides power dissipation that varies with temperature. The device can be used in any application that requires a known amount of attenuation change for a particular temperature shift. This is particularly useful for preventing gain loss over temperature in various amplifier applications.

In applications from DC - 50 GHz, EMC's Thermopad is the ideal temperature compensation solution for cost, size, performance, and reliability. The Thermopad can replace closed loop temperature compensation circuits with a single chip device requiring no bias or active control. Since the Thermopad produces no signal distortion it excels in applications involving multiple tones and complex modulation schemes such as cellular base station applications and radar. In high reliability, military, and spacecraft applications the Thermopad reduces system complexity and cost.

Thermopad® Selector Tool



Part Numbering Code



Note: Not every combination of attenuation and TCA values are available.

Mounting Style Options

Planar (no code) Planar device for flip chip mounting offers the best RF performance and lowest cost.

Triple Wrap (W3) Metallization wraps around input, output, and ground terminals. Permits inspectable solder fillets when flip chip mounting.

Surface Mount (SMT) Metallization wraps around input, output, and ground terminals. For a true surface mount technology. (WTVA and TS09 series only). Or flip chip surface mount. (KFA, KTVA, QFA and QTVA).

Single Wrap (W1) Metallization wraps around ground terminal only. Full backside metallization.

Single Wrap (WB1) Metallization wraps around ground terminal only. Full backside metallization. Input and output terminals have gold metallization for wire bonding (MTVA series only).

Double Wrap (WB2) Metallization wraps around ground terminal only on 2 sides. Full backside metallization. Input and output terminals have gold metallization for wire bonding (WTVA and TS09 series only).

Environmental Compliance Options

Standard (no code) Plated (with Sn60Pb40 solder) improves solderability (available on all of the above options except Option G and KTVA).

Pretinned (S) Pretinning (with Sn60Pb40 solder) improves solderability (available on all of the above options except Option G and KTVA).

RoHS (F) RoHS compliant option (excludes WB1, G, and S metallization options).

Gold (G) Planar device with gold metallization. Typically used for wire bonding (TVA, MTVA and HTVA series only).

Note: KTVA bondable unit backside ground metallization is platinum silver. Input and output terminals have gold metallization for wire bonding.

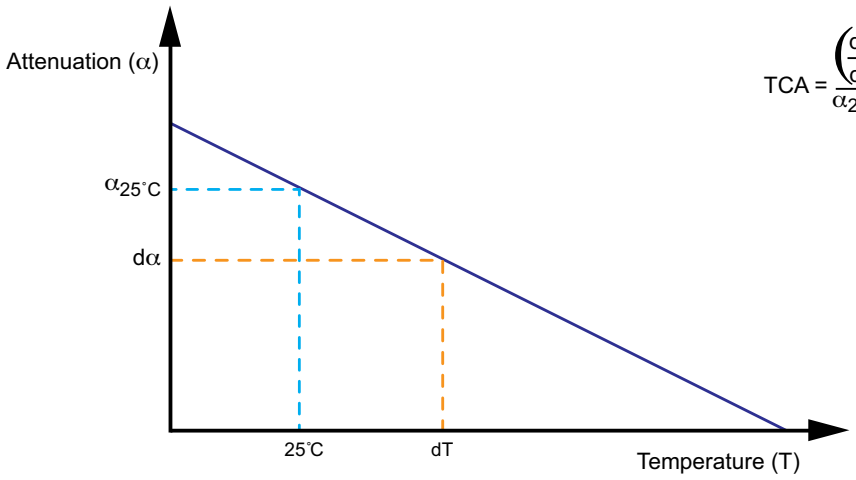
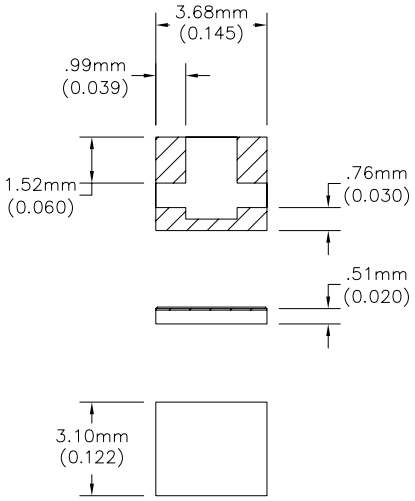
*TCA is temperature coefficient of attenuation and is calculated using the following equation:

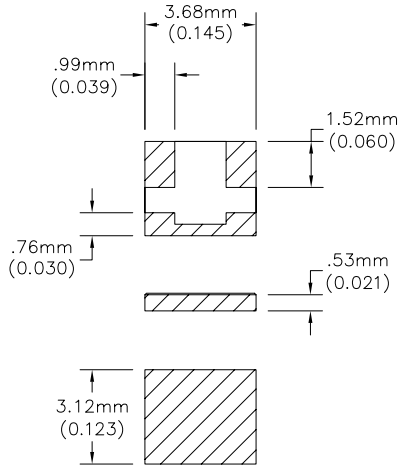


$$TCA = \frac{\left(\frac{d\alpha}{dT}\right)}{\alpha_{25^\circ C}} \text{ dB/dB/˚C}$$

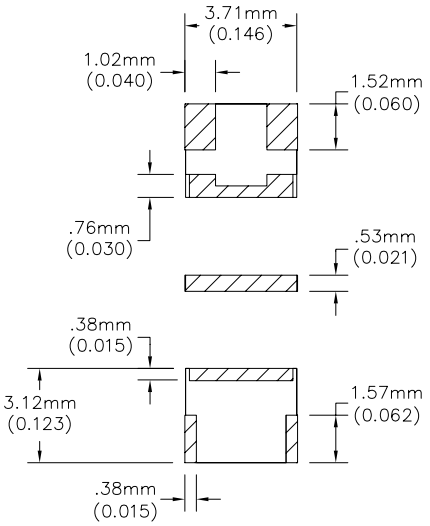
TVA Planar Series



TVA Single Wrap Series



TVA Triple Wrap Series



EMC Technology's TVA Thermopad®s are microwave absorptive attenuators which provide power dissipation that varies with temperature and operate in frequency ranges from DC to 6 GHz. This surface mount, temperature variable attenuator requires no bias or control voltages and generates zero distortion. This product is available with various metallization styles and plating options including gold for wire bonding applications, RoHS compliant lead free silver over nickel plating, 60/40 low temperature solder plating or 60/40 solder fused finish for easy reflow processing. It is available in both negative and positive shifting temperature slopes.

Specifications

Size	3.10mm x 3.68mm [0.122in x 0.145in]
Impedance	50 Ohms
Frequency Range	DC to 6 GHz

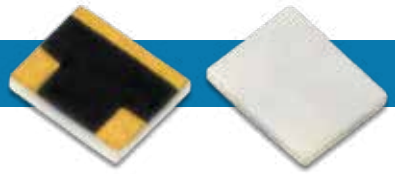
MTVA (18.0 GHz)

Mini Thermopad®



EMC Technology's MTVA Thermopad®s are microwave absorptive attenuators which offer a smaller physical size with increased frequency range. The series operates DC to 18 GHz. The MTVA version of the Thermopad also offers wire bondable terminals for use with alternative high frequency attachment methods and space applications. This product is available with various metallization styles and plating options including RoHS compliant lead free silver over nickel plating, 60/40 low temperature solder plating or 60/40 solder fused finish for easy reflow processing

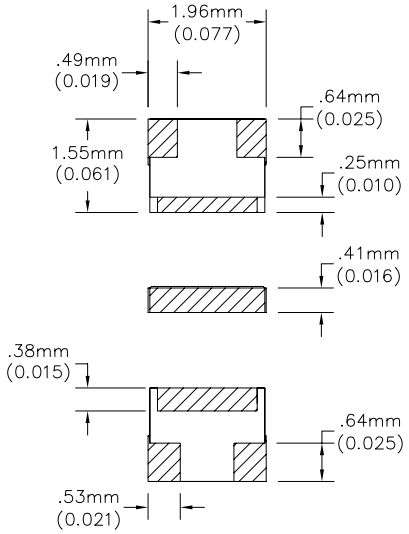
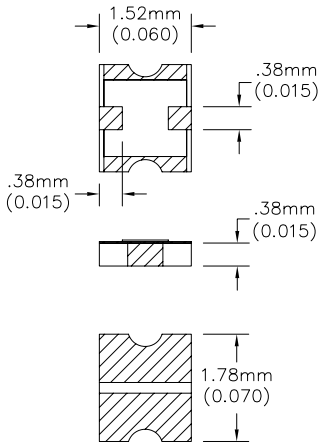
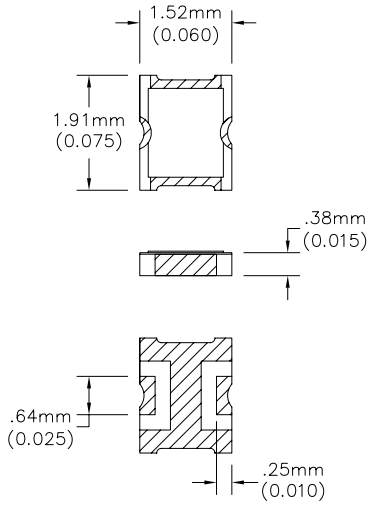
MTVA Triple Wrap Series



WTVA Double Wrap Wire Bond Series



WTVA Surface Mount Series



The WTVA is EMC's wide band temperature variable attenuator. This product provides a good linear shift from DC to 20 GHz and from -55˚C to +125˚C. EMC Technology's Thermopads® are microwave absorptive attenuators which provide power dissipation that varies with temperature. They are used to correct gain variations in amplifiers and other active components which tend to have gain anomalies over temperature. The WB2 style uses thick film gold wire bondable terminals. The SMTF style is a RoHS compliant surface mount configuration. The WTVA is the preferred version of EMC's Thermopad for use in satellite communications, broadband EW applications, and for high frequency and broadband amplifiers.

KTVA (36.0 GHz)

K-Band Thermopad®

EMC Technology's KTVA high frequency Thermopads® are ideal for millimeter-wave amplifiers. KTVA is capable of handling 100 milliwatts input power and available in wire bondable and surface mount packages. Standard narrowband versions cover specific segments in K and Ka bands. An optimized broadband version operating from 16 to 36 GHz is also available. KTVA design also offers custom frequency band responses for narrow band applications with improved VSWR performance and attenuation accuracy. This product is space qualified and has flight history for those requiring pre-qualified heritage.

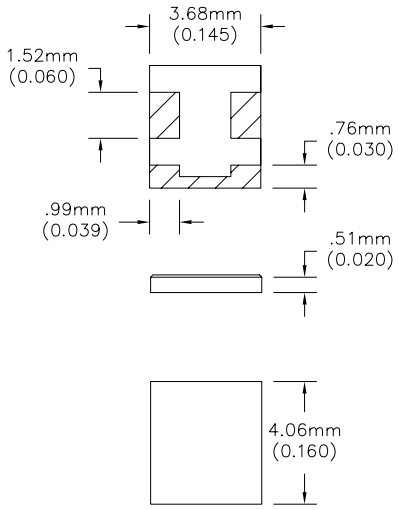
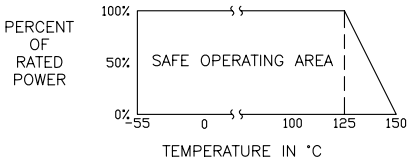
ETVA (3.0 GHz)

Extended Shift Thermopad®

ETVA Planar Series



Power Rating and Derating



ETVA Thermopads® are microwave absorptive attenuators which provide power dissipation that varies with temperature and operate in frequency ranges from DC to 3 GHz. The ETVA features higher temperature coefficient of attenuation, therefore allowing for greater gain variation compensation. This surface mount, temperature variable attenuator requires no bias or control voltages and generates zero distortion. This product is available with various metallization styles and plating options including RoHS compliant lead free silver over nickel plating, 60/40 low temperature solder plating or 60/40 solder fused finish for easy reflow processing.

Specialty Thermopads

Coaxial Thermopad®

Combining EMC Technology components with Florida RF Labs connector expertise to offer the popular temperature variable attenuator in a coaxial package. The coaxial Thermopad® offers the same benefits as the standard temperature variable attenuator with the added benefit of an SMA plug to SMA jack interface.

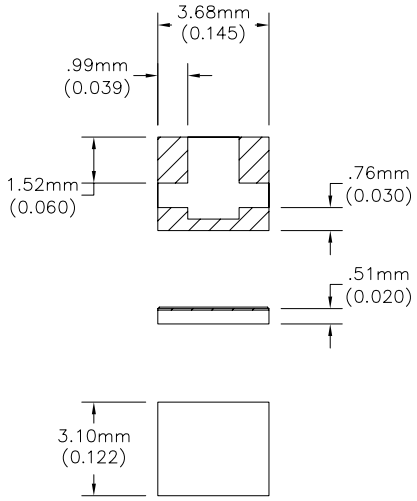
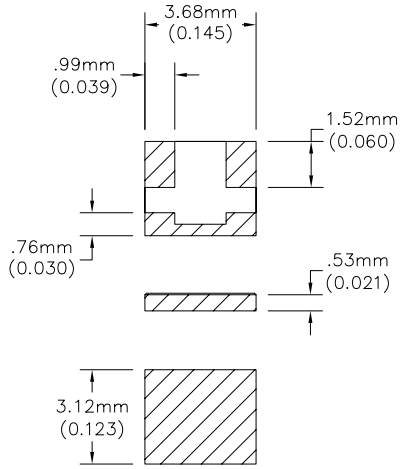
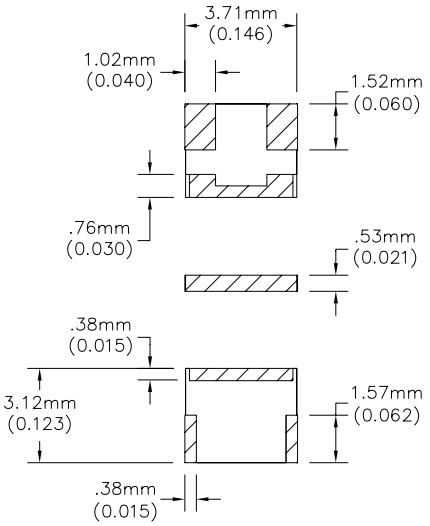
HRT Planar Series



HRT Single Wrap Series



HRT Triple Wrap Series



EMC's Thermopad®, temperature variable attenuator, is S-Level qualified for high reliability applications. As a completely passive temperature compensation solution, Thermopad offers the benefits of reduced system complexity and improved overall reliability, which are critical for space and military applications. The HR series of the TVA is optimized for DC to 6 GHz operation and may be ordered with group A, B, or C testing based on Mil-PRF-55342.

Specifications

Size	3.10mm x 3.68mm [0.122 in x 0.145 in]
Impedance	50 Ohms
Frequency Range	DC to 6 GHz
TCA Tolerance	±0.001 dB/dB/°C
VSWR (Typical)	1.30 @ 1 GHz
Power Rating	2.0 Watts
Operating Temperature	-55 °C to 150 °C
Substrate	Alumina
Resistive Material	Thick film
Terminal Material	Thick film, Nickel Barrier with Solder Plated Finish

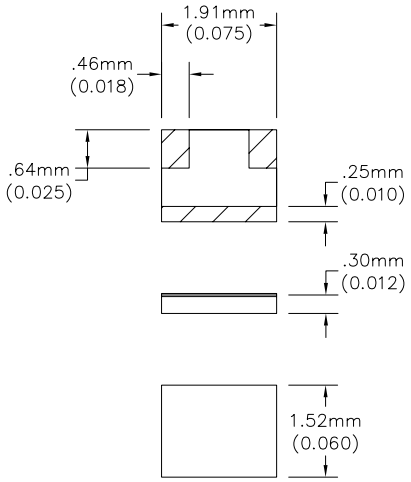
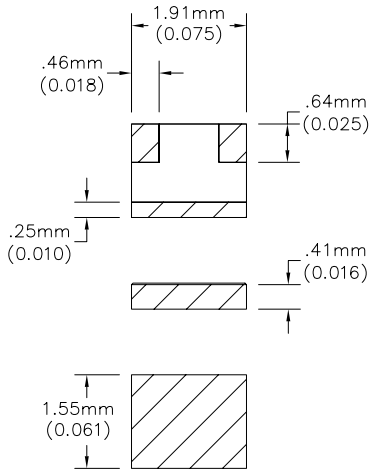
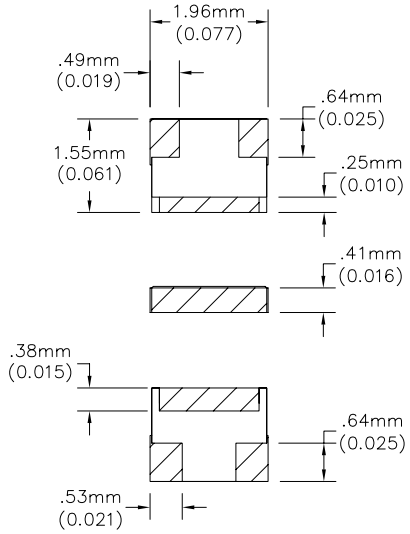
HRM Planar Series



HRM Single Wrap Series



HRM Triple Wrap Series



Features

- Substrates - BeO, AlN, Alumina and CVD Diamond
- Commercial and High Reliability Product Lines
- Frequency Range from DC to 50 GHz
- Attenuation Values from 0 to 30 dB
- Space and Military Qualified
- Surface Mount, Wire-Bondable and Coaxial Configurations

Benefits

- Small Footprint
- Totally Passive
- Power Handling up to 400 Watts
- Several Metallization Options Available, Including a RoHS Compliant Version

Applications

- Circulators
- High Power Amplifiers
- Receivers
- Filters
- Isolators
- Signal Sampling
- Interstage Isolation
- Impedance Matching

For our **CVD Diamond Attenuators** *see* **Diamond Rf Resistives®** *on pages 65 to 74*

We are the world leader in fixed attenuators from DC through Q band. Fixed attenuators are available in 0.1 to 400 watt versions, covering DC to 50 GHz applications and offered in 0 to 30 dB values. Our attenuators are available in many package styles including chip, tab & cover, flange and coaxial models for use in both low and high power applications. These products are available in standard commercial product as well as high reliability versions.

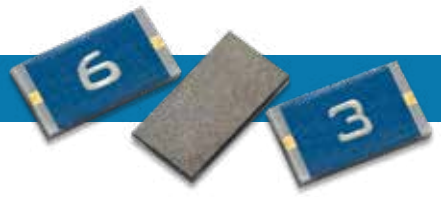
KFA (36.0 GHz)

K-Band Attenuator



EMC Technology's KFA series fixed attenuators are footprint-compatible with KTVA and operate from 16 to 36 GHz. Standard attenuation values from 1 to 10 dB are available. The KFA is also available for high-reliability applications under the HRKFA part number with Group A, B and C testing according to Mil-PRF-55342. This attenuator is available with wire-bondable gold terminals and a platinum silver, solder attachable ground plane.

Specifications

Size	3.05mm x 1.65mm [0.120in x 0.065]

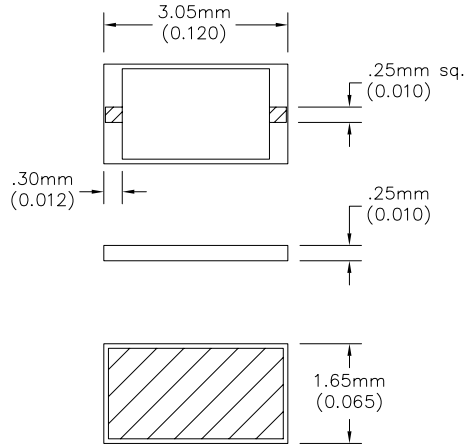
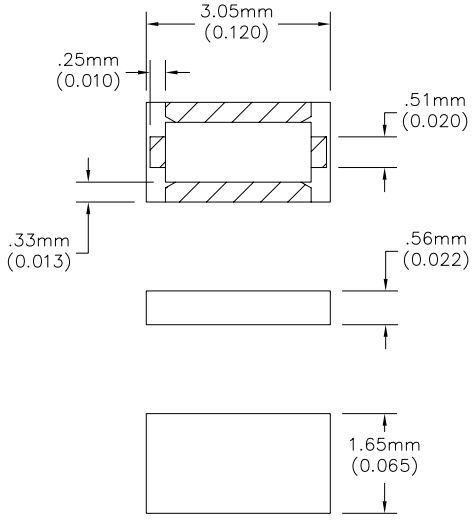
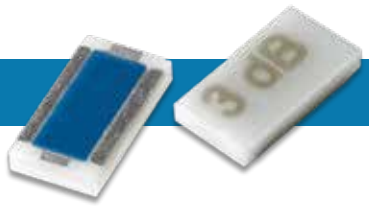
KFA Wire Bond Series

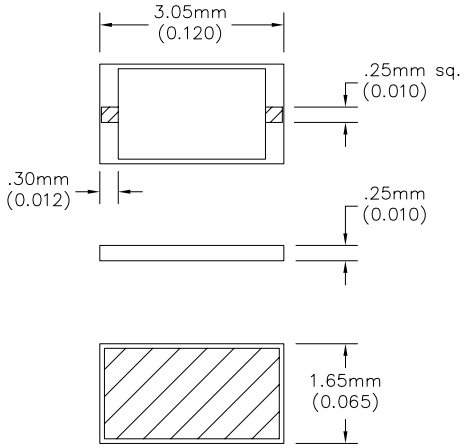


KFA Surface Mount Series

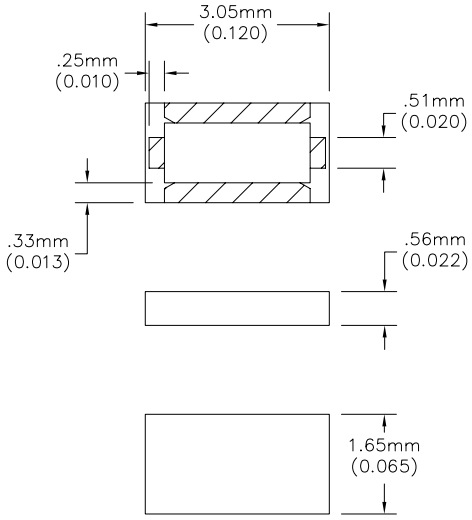




QFA Wire Bond Series



QFA Surface Mount Series



The QFA series offers passive fixed attenuation from 36 to 50 GHz. Being passive in nature, there is no signal distortion, phase shift or time delay. The attenuator structure is internally tuned for optimum performance beyond Ka band, with the added benefit of being a truly symmetrical, bidirectional attenuator. The QFA is available in surface mount packaging The QFA was developed to address commercialization of point-to-point radio, high frequency transceivers, and phased array radar. The device comes in two styles, microstrip and coplanar, with excellent frequency response from 36 through 50 GHz and is available in designs of 0 to 10dB. The QFA handles 200 milliwatts of input power and has a small 1206 footprint. All values are available in RoHS versions and all can be supplied on tape and reel for high volume pick and place applications.

The TS07XX(F) is an SMT fixed attenuator and is suitable for all Telecom and WiMax applications. This conveniently sized 0805 chip attenuator has excellent frequency response from DC to 6 GHz. The TS07 series is available in attenuation values of 0 through 10 dB in one dB increments and operates within a temperature range of -55 to +125 ºC. This cost effective attenuator can handle 100 milliwatts of input power and is packaged on 1,000 piece reels for high volume, pick and place assembly. All values are RoHS compliant.

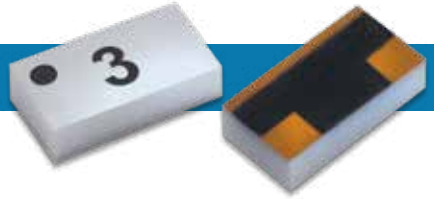
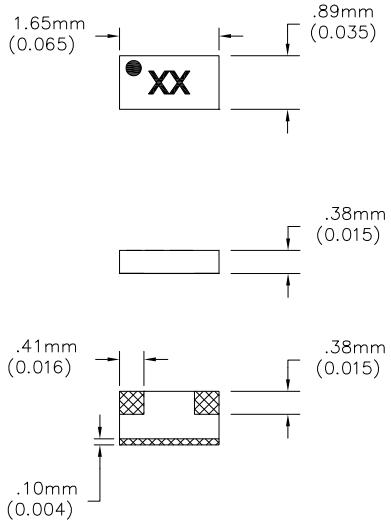
TS06 (DC-20 GHz)

Chip Attenuator



EMC Technology's trailblazing research and development in resistive technology over the last five decades have culminated in yet another advanced fixed attenuator series. Our latest TS06 series is compact in size and excellent in frequency response. Featuring a space-saving 0603 footprint without sacrificing power handling capability, the TS06 series is the best performer among our existing small-signal fixed attenuators in terms of attenuation accuracy and VSWR. TS06 series is the most ideal and balanced solution for designers needing a sub-20 GHz fixed attenuator in their space, defense, and commercial wireless applications.

TS06 Single Wrap Series



Specifications

Figure 1

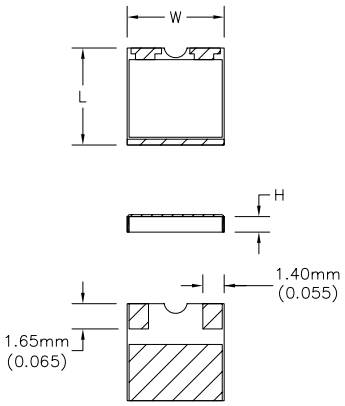

Figure 2

Tab & Cover devices are flangeless with protective ceramic covers and tab contacts, offering the highest performance available of any package style component. They are designed for direct solder attachment to a heat sink for excellent heat transfer. The tab and cover attenuators have attenuation range from 1 dB to 30 dB. Typical attenuation tolerance for values between 1-10 db is +/- 0.5 dB and 11-30 dB is +/- 1.0 dB (may vary for certain products please refer to drawing). All devices are made compliant to RoHS.

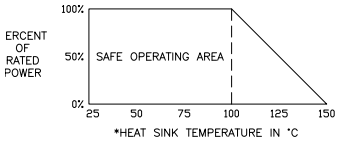
Features

- Substrates - BeO, AlN, and Alumina
- Highest Performance
- Direct Attachment
- Attenuation Values from 0 to 30 dB
- Single Tab and Double Tab Configurations
- Many Finishes Available

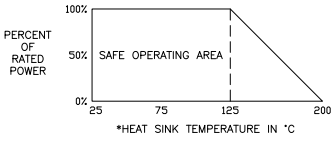
Specifications

Impedance	50 Ohms
Frequency Range	DC to 4 GHz
Attenuation Accuracy	±0.5 dB
VSWR (Typical)	1.30 @ 1 GHz
Power Rating	10 - 250 Watts
Operating Temperature	-55°C to 150°C
Substrate	Alumina, BeO or AlN
Resistive Material	Thin Film
Tab Contact	Different Finishes Available

Power Rating and Derating



Alternative Derating Available Upon Request



**The heat sink is defined as the surface that the Component is attached to, ie. chassis or printed circuit board.*

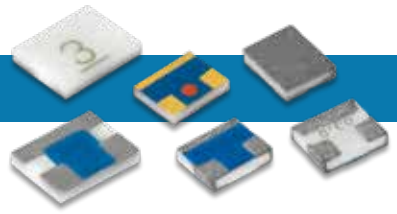
HR05 (18.0 GHz)

High Reliability Chip Attenuator



EMC Technology's miniature size attenuators with extended broadband frequency operation from DC to 18 GHz are available tested based on Mil-PRF-55342 for high reliability applications. Simply choose the testing level you require by selecting Group A, B, or C. The product is rated for 100 milliwatts of input power with attenuation values from 0 dB to 20 dB. The space-approved thin film tantalum nitride (TaN) resistive elements offer superior electrical performance and mechanical integrity. The devices are shipped in serialized waffle packaging with tested samples marked and packaged separately and includes serialized test data.

Specifications

Size	1.52mm x 1.91mm [0.060in x 0.075in]
Impedance	50 Ohms
Frequency Range	Planar Series DC to 18 GHz W Series DC to 12.4 GHz
VSWR (Typical)	1.30
Power Rating	100 Milliwatts
Operating Temperature	-55°C to 150°C
Substrate	Alumina
Resistive Material	Thin Film
Terminal Material	Thick Film, Nickel Barrier with Solder Plated or RoHS, Gold and Wire Bondable options available

42 Series (18.0 GHz)

Coaxial SMA Attenuator

Bridging the gap between EMC Technology components and Florida RF Labs cable assemblies, our line of precision coaxial attenuators offer an easy to use attenuation solution for applications with up to 2 watts of input power. The rugged construction of the device ensures reliability and uninterrupted high performance with operating frequencies up to 40 GHz.

Features

- Rugged Construction
- Excellent Performance
- Value Pricing
- Subsystem Connector Interface
- SMA & 2.92mm

General Specifications

Impedance	Power	Operating Temperature	Pins	Body & Nut

Features

- Frequency Range from DC to 26 GHz
- Power Handling up to 1000 Watts
- BeO, ALN, Alumina or CVD Diamond Substrates
- Telecom Tuned Circuit Designs Available
- Tin/Lead, Lead Free, or Solder Fused Plated
- Tape and Reel Packaging Available
- High Reliability Versions Available
- Tab & Cover, Flange-Mounted, Threaded, Stripline Flange, Pill, Coaxial Remote (CRT), Surface Mount and Wire-Bondable
- S-Parameter Data Available

Applications

- Broadcast (TV and Radio)
- High Power Amplifier
- High Power Filters
- Instrumentation
- Isolators
- Military
- Remote Termination
- Satellite Communication
- Splitters / Combiners

For our **CVD Diamond Terminations** *see* **Diamond Rf Resistives®** *on pages 65 to 74*

We offer a full line of high power RF terminations including styles such as: chip, tab & cover, flange-mounted coaxial, SMA, stripline flange, surface mount and wire-bondable. Our tuned circuit chip designs deliver the lowest VSWR, while extending frequency ranges for broadband applications. Some devices are capable of handling power up to 1KW and frequencies up to 26.5 GHz. Our products are offered in different substrates such as: Alumina, BeO, AlN and CVD diamond.

Quick Selector Chart

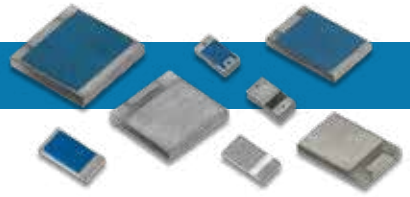
SMT Series

Surface Mount Terminations



We offer a wide selection of SMT chip terminations handling input power levels up to 250W and covering frequency ranges up to 4 GHz. Using EMC's patented asymmetrical wrap geometry, the thermal dissipation of the surface mount termination is improved by increasing the solderable grounding area. This eliminates the need for bolt down heat sinks and tabs, thereby reducing assembly costs.

Specifications

Impedance	50 Ohms
Frequency Range	DC to 4 GHz
Power Rating	100% @ 100 °C

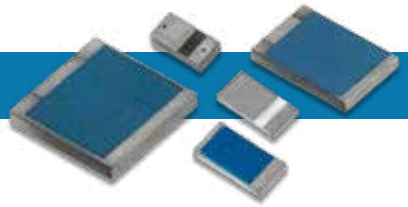
CT High Power Series

Chip Termination



Our high power chip terminations are available in both thick film and thin film resistor designs, offering you flexibility needed to match the correct part more closely to your specific application. Many designs have been optimized for RF performance and so will minimize the variability of capacitive reactance. Localized hot spots associated with trimming have been virtually eliminated. Reduced variation means your circuit performs so consistently that in most cases no external tuning is required.

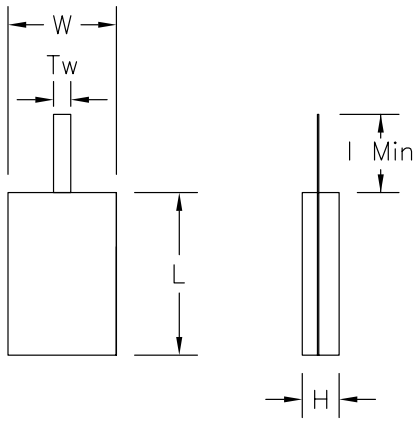
82 Series

Tab & Cover

Tab and cover terminations are flangeless devices with protective ceramic covers and tab contacts, offering the highest performance available of any style of component. They are designed for direct solder attachment to a heat sink or circuit board (thermal vias required) for excellent heat transfer. These devices deliver excellent VSWR over a broad frequency band. The frequency ranges from DC to 18 GHz. The power rating ranges from 10 to 500 watts. Optional lead forming is available on most designs.

TC



"I min" dimension = 3.18 mm [0.125]

Specifications

Impedance	50 Ohms
Resistance Range	10 to 300 Ohms
Frequency Range	DC to 18 GHz
Power Rating	100% @ 100°C
Derates to	0% @ 150 °C
Operating Temperature	-55 °C to 150 °C*
Substrate	BeO, AlN or Alumina
Resistor	Thin Film
Tab Contact	Beryllium Copper, Tin or Silver Plated
Cover	Alumina
Solderable Ground Plane	See Plating Option

**100˚C is referenced at the heat sink*

Peak power is typically 10 times the max power rating with a 1% duty cycle and 100 microsecond pulse width.

EMC Technology offers the widest selection of flange mount terminations worldwide. High power flange mount components offer excellent performance and the convenience of bolt-in installation. The flanged mounted devices deliver power ratings up to 1000 watts and frequency ranges from DC to 18 GHz. The packages are available in single hole, double hole and fourhole flange configurations. Tab strain relief is available on all configurations.

We also have a line of flange terminations that offers the lowest Passive *Intermodulation* (PIM) distortion in the market and which are 100% tested to guarantee the highest performance.

Optional lead forming is available.

All devices with the “32” prefix have thin film resistor elements while the part numbers beginning with “5” have thick film resistors.

Specifications

Impedance	50 Ohms
Resistance Range	10 to 250 Ohms
Frequency Range	DC to 18 GHz
Power Rating	100% to 100°C*
Derates to	0% @ 150 °C
Operating Temperature	-55 °C to 150 °C
Resistor	Thick or Thin Film
Tab Contact	Beryllium Copper, Tin or Silver Plated
Cover	Alumina
Mounting Flange	Copper, Nickel Plated

**100˚C is referenced at the heat sink*

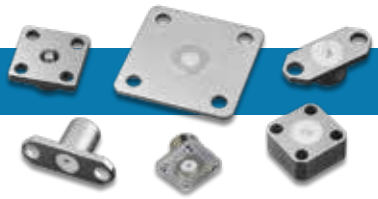
Stripline Flange Series

Flange Termination



Our Stripline flange terminations are ideal for coaxial isolator applications. Many designs feature a solderless construction. The resistive rod element is staked into the case, forming a highly reliable compression fit. The result is a superior electrical performance which is unaffected by subsequent high temperature manufacturing processes. Many of these products are space-qualified and can be tested for high reliability applications.

Note: Part numbers beginning with “8” offer the solderless construction.

Specifications

Impedance	50 Ohms +/-5%
Connections	Type N, SMA, SSMA, TNC
Frequency Range	DC to 26.6 GHz
Power Rating	100% @ 100°C
Derates to	0% @ 150 °C
Operating Temperature	-55 °C to 150 °C
Substrates	BeO or Alumina
Resistive Element	Thin Film
Body	Aluminum with Chromate Finish
Tab or Socket Contact	Beryllium Copper, Gold Plated based on MIL-G-45204
Slot Contact	Brass, Gold Plated per SAE AMS 2422

Attenuators aren't the only products where we have combined EMC Technology components with Florida RF Labs connector expertise! We also offer a complete series of SMA, 3.5 mm and 2.9 mm interface compatible coaxial terminations. Some designs are specifically suited for narrow or wide band applications. These terminations have low VSWR, and operate at frequencies from DC to 26.5 GHz. They are ideal for both laboratory measurements and system use.

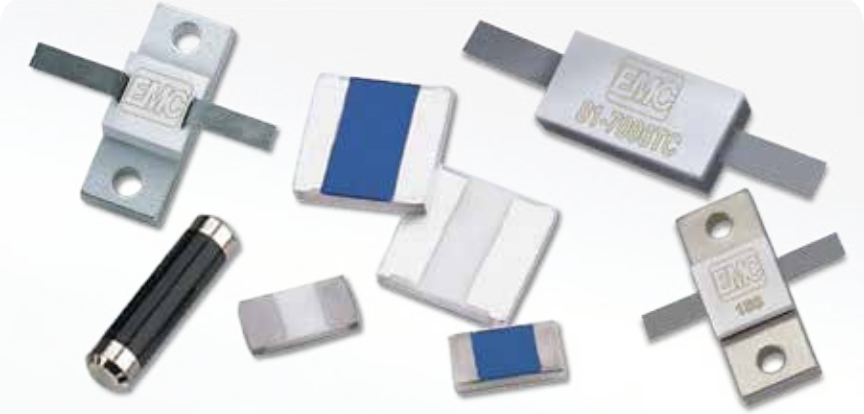
Features

- Lead Free, RoHS Compliant Option Available
- Low Capacitance
- Mounting - Surface Mount, Tab & Cover, Flange, and Rod
- Power Levels: 0.05 to 800 Watts
- 50 and 100 Ohms Standard
- Tight Resistance Tolerance - ±5%, ±2%, and ±1% Available
- Tuned Circuit
- Available in AlN, BeO, or Alumina
- Substrate Thicknesses of .015" to .120" Available
- Rod Diameters of .020" to .375"
- Custom Tab Forming Available
- Resistance Ranges from 3 to 400 Ohms
- Small Footprint and Low profile

Applications

- Base Stations
- Broadcast (TV and Radio)
- High Power Amplifier
- Instrumentation
- Military
- Radar System
- Satellite Communications
- Splitters/Combiners
- Voltage Dropping Resistor
- Wilkinson Dividers

For our **CVD Diamond Resistors** *see* **Diamond Rf Resistives®** *on pages 65 to 74*



EMC Technology offers low and high power RF resistors including surface mount chips, tab & cover chips, flange mounted and rod types. These resistors are available with Alumina, AlN, BeO and CVD substrate materials. Some devices use a tuned circuit design to minimize parasitic capacitance across their usable frequency bands. Most devices are available in a wide range of resistance values, typically from 1 ohm to 1,000 ohms.

Choose from a variety of metallization finishes for easy mounting to a heat sink or directly to a printed circuit board. Typical finishes include: Lead-free, RoHS compliant plating (silver or gold), solder finish with Sn60Pb40 or solder fused finish with Sn60Pb40 depending upon package type. Select from bulk, tape & reel, or waffle packaging, again, depending upon resistor package style.

Quick Selector Chart

Mounting Style	Power (Watts)	Page
Surface Mount Chip	800	56-57
Tab & Cover	500	58-59
Flange	800	60-62
Rod	40	63

Surface Mount

Chip Resistor

Surface mount chip resistors are available in three different terminal styles for either RF or DC applications, such as bias voltage dropping or heaters. Terminal Style A has a full backside metallization for direct attachment to a heat sink or an item to be heated. Terminal Style B has wrap-around divider for low power SMT applications. Terminal Style C has a split ground that allows it be mounted as a resistor or termination. This style provides a larger ground area for increased heat dissipation and is an excellent choice for high power SMT applications.

Specifications

Standard Resistance	50 & 100 Ohms ±5%
Resistance Range	3 to 400 Ohms
Power	2 to 800 Watts
Power Rating	100% @ 100°C
Derates to	0% @ 150°C
Operating Temperature	-55°C to 150°C
Substrate	BeO, AlN or Alumina
Resistive Element	Thin or Thick Film
Solderable Terminals	See Plating Option
Environment	Meets applicable sections of MIL-PRF-55342

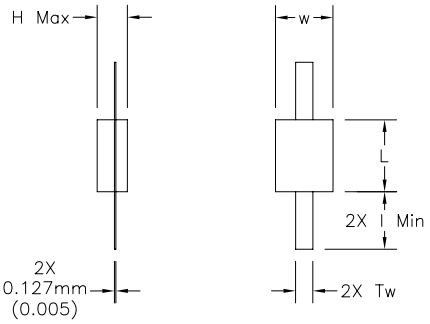
For I, B and C dimensions see data sheet on website.

Tab & Cover

Resistor

Tab & Cover resistors are ideal for mounting directly to a heat sink or onto a circuit board. The resistors are available with BeO, Aluminum Nitride (AlN) or Alumina substrates. These devices have standard resistance values of 50 & 100 ohms, however, are available in many non-standard values as well. The power rating ranges from 10 to 500 watts. Applications include Wilkinson divider/combiner that require low capacitance to ground. Packaging options are tray or tape & reel. All devices are available RoHS compliant.

81-Series Tab & Cover



For “I min” and Tw dimensions see data sheet on website.

Specifications

Standard Resistance	50 & 100 Ohms ±5%
Resistance Range	5 to 400 Ohms
Power	10 to 500 Watts
Power Rating	100% @ 100°C
Derates to	0% @ 150°C
Operating Temperature	-55°C to 150°C
Substrate	BeO, AlN or Alumina
Resistor	Thin Film
Tab Contact	Beryllium copper
Cover	Alumina
Ground Plane	Plated Thick Film

/1 & /2 Slightly different specifications

/3 & /4 Slightly different body size and lead length

Peak power is typically 10 times the max power rating with a 1% duty cycle and 10 microsecond pulse width.
Capacitance is parallel and measured to 2.7 GHz.
"*" is a place holder. See part number configuration to complete the part number.
For a complete part number, include resistance and tolerance as described above in ordering information.
Please call the Sales department for specific applications.

Flange

Resistor

Flange resistors are excellent for mounting directly to heat sinks for improved heat dissipation. The devices are available in single, double and four hole flange mounting styles. These devices have standard resistance values of 50 & 100 ohms, however most designs are available in non-standard values as well. The flange resistors are offered in power ratings ranging from 10 to 1000 watts. Many designs are available in both BeO and Aluminum Nitride (AlN) substrates. The 31-XXXX designs, traditionally have a thin film resistor while the 5XXX designs, use a thick film resistor.

Specifications

Standard Resistance	50 & 100 Ohms ±5%

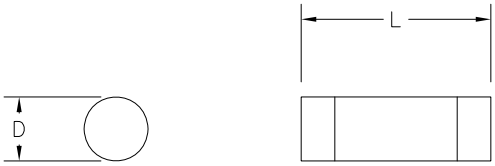
/2 Formed Tabs

Rod



Rod resistors are typically used in wideband high performance coaxial terminations. They feature thin film resistance elements trimmed without kerfs for stable, high frequency characteristics. The high temperature protective coating protects the film during assembly operations. In applications where one end of the rod resistor is soldered directly to the heat sink, power handling as much as 10 times its rated power may be achieved.

Terminations constructed with our rod resistors, when designed properly, will yield a maximum VSWR of 1.05:1 at 4 GHz and 1.1:1 at 12 GHz.

Standard resistance range:10-250 ohms with tolerance of 5%.

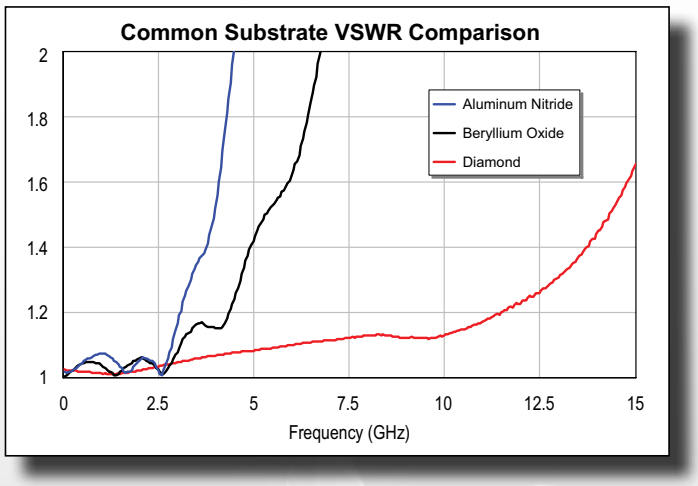
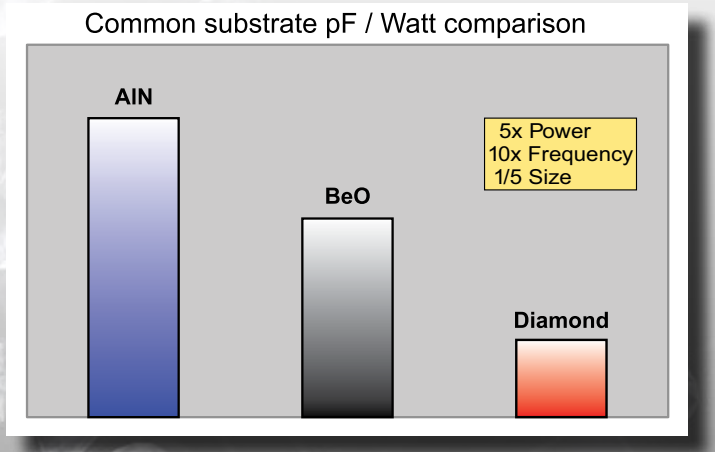
Notes

Diamond is the best thermal conductor on earth. Combined with a low dielectric constant, it is an excellent RF dielectric material for high-frequency applications in which thermal performance is equally critical.

By applying cutting-edge thin film process and extensive millimeter wave design experience, EMC Technology has created a high-performance line of resistive components. The resulting products, our Diamond Rf® resistors, terminations, and attenuators, are significantly reduced in size and unparalleled in average and peak power handling.





Quick Selector Chart

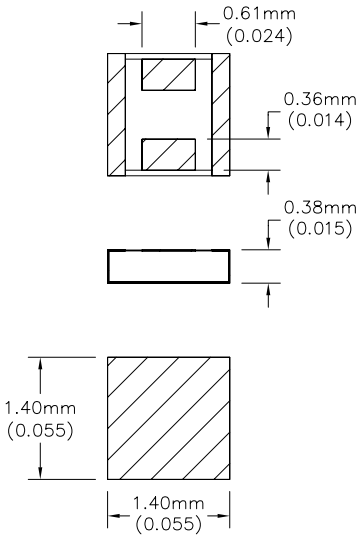
Diamond Terminations	72-74

Diamond Rf Resistives®

Diamond Chip Attenuator

EMC Technology offers a line of CVD Diamond chip attenuators with extremely high power ratings. With operating frequency of DC to 26.5 GHz, these products are ideal for military and space applications because of their high power handling capability, broad frequency response and small footprint. The CA0505D are manufactured using all thin film construction. The gold finish on terminals is both wire-bondable and solderable. Standard chip and high reliability tested versions per Mil-PRF-55342 are available. Select from tape and reel or waffle packaging. These products are lead free, RoHS compliant and S-level approved. Standard available values are 1 through 10, 20, and 30 dB.

CA0505D



Specifications

Nominal Impedance	50 Ohms
Frequency Range	DC to 26.5 GHz
Attenuation Values	1 thru 10, 20 and 30 dB
Power Rating	20 Watts
Operating Temperature	-55 °C to 150 °C
Resistive Material	Thin Film
Terminal Material	Thin Film, Gold Solderable or Bondable Finish

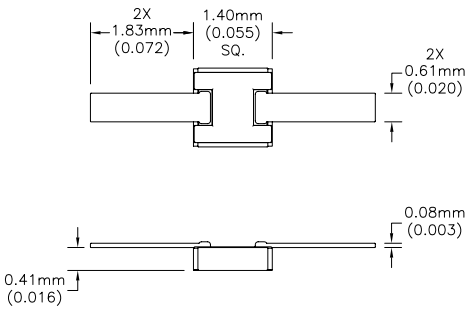
CA0505D T



EMC Technology offers a line of CVD Diamond chip attenuators with extreme high power ratings. With operating frequency of DC to 26.5 GHz, these products are ideal for military and space applications because of their high power handling capability, broad frequency response and small footprint. The CA0505D T are manufactured using all thin film construction and have a thin film gold terminations. These units have a gold plated copper tab for ease of installation. Standard chip and high reliability tested versions based on Mil-PRF-55342 are available. Select from tape and reel or waffle packaging. These products are lead free, RoHS compliant and S-level approved. Standard available values are 0 through 10, 20, and 30 dB.

Diamond Rf Resistives®

Diamond Flange Attenuator

EMC Technology offers a line of CVD Diamond chip attenuators with extreme high power ratings. With operating frequency of DC to 26.5 GHz, these products are ideal for military and space applications because of their high power handling capability, broad frequency response and small footprint. The CA0505D FT is manufactured using all thin film construction with gold finish. These units are equipped with a gold plated copper tab and integrated heat sink for ease of installation. Standard chip and high reliability tested versions based on MIL-PRF-55342 are available. Select from tape and reel or waffle packaging. These products are lead free, RoHS compliant and S-level approved. Standard available values are 1 through 10, 20 and 30 dB.

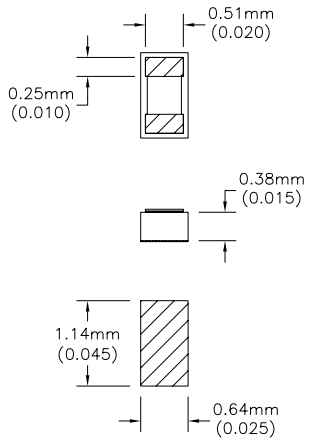
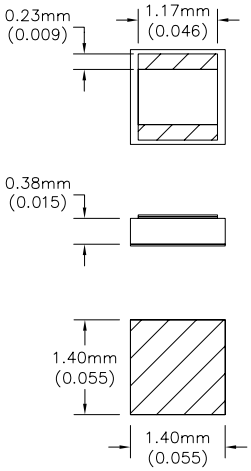
CR0402D



CR0505D



EMC Technology surface mount (CR) chip resistors with extreme high power ratings may be used in applications from DC to 30.0 GHz and are ideal for military and space applications because of their high power capability, broad frequency response and small, light-weight size. They are manufactured using all thin film construction and have a thin film gold finish that is both wire bondable and solderable. Because of their total thin film construction they are ideal for peak power applications. Standard chip and high reliability tested versions based on Mil-PRF-55342 are also available. Select from tape and reel, bulk, or waffle packaging. These products are lead free, RoHS complaint and S-level approved. Standard available values are 50 & 100 ohms. Contact us directly for non-standard resistance values.

Specifications

Resistance Values	Part Series	50 and 100 Ohms +/-5%

Reduce the Size and Weight of Phased Array Radar Feed Network Easily

Corporate-feed networks in phased array radars have benefited from the small footprint, high power handling, and excellent high-frequency characteristics of Diamond Rf resistors. The use of Diamond Rf resistors such as CR0505D, in place of the traditionally larger components, has significantly reduced the size and weight of the feed network without compromising power handling and thermal performance.

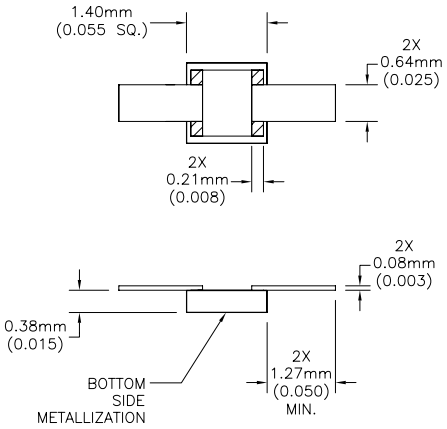
CR0505DT2



CVD Diamond surface mount (CR) chip resistors with extreme high power ratings. These resistors may be used in applications from DC to 30.0 GHz and are ideal for military and space applications because of their high power capability, broad frequency response and small, light-weight size. These terminations are available in easy to mount double wrap and tab mount units. They are manufactured using all thin film construction and have a pure thin film gold finish that is both wire bondable and solderable. They can be supplied with or without solderable tabs.

Diamond Rf Resistives®

Diamond Chip Termination

Our exclusive line of CVD Diamond chip terminations offers a unique combination of extreme high power ratings in very small packages. These terminations may be used in applications from DC to 28.0 GHz and are ideal for military and space applications because of their high power capability and small, light-weight package size. The terminations are manufactured using all thin film construction and have a gold finish that is both wire bondable and solderable. This total thin film construction also makes them ideal for peak power applications. High reliability tested versions based on Mil-PRF-55342 are also available. Select from tape and reel, bulk, or waffle packaging. These products are also lead free, RoHS compliant and S-level approved.

Diamond Flange & Tabbed Termination

Our exclusive line of CVD Diamond chip terminations offers a unique combination of extreme high power ratings in very small packages. These terminations may be used in applications from DC to 26.5 GHz and are ideal for military and space applications because of their high power capability, broad frequency response and small, light-weight package size. These terminations are available in easy to mount tab and flange mount units.

They are ideal for peak power applications. They are manufactured using all thin film construction and have a pure thin film gold finish that is both wire bondable and solderable. They can be supplied with or without solderable tabs. High reliability tested versions based on MIL-PRF-55342 are also available. These products are lead free, RoHS compliant and S-level approved. They also meet NASA out-gassing requirements for space applications.

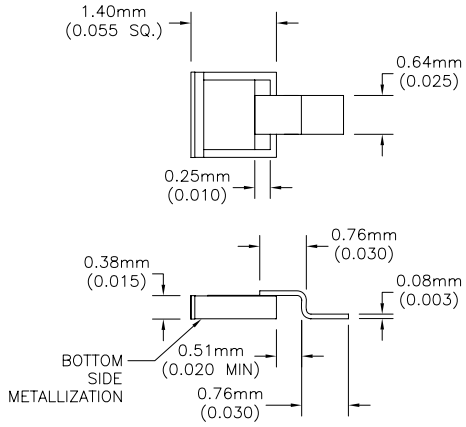
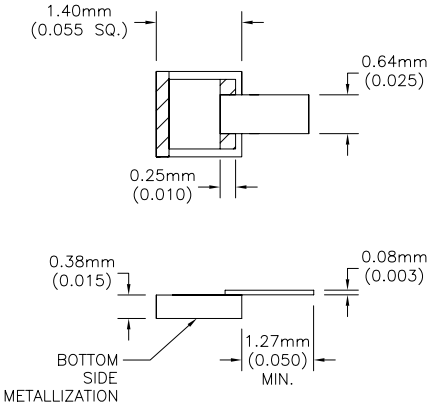
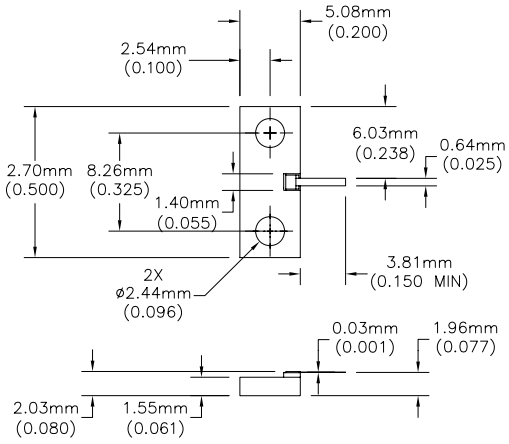
CT0505DTB



CT0505DT



CT0505DHT

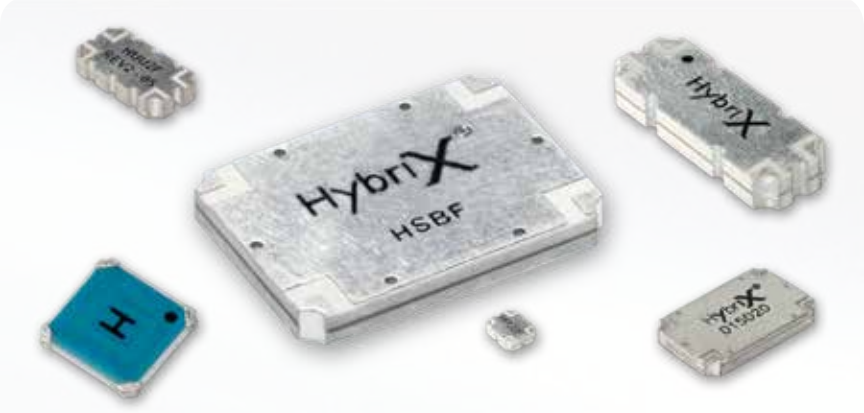


Features

- Frequency Ranges from 48 MHz to 18 GHz.
- Surface Mountable
- Very Small Footprints (6mm x 3mm Available)
- High Power Handling (up to 500 W)
- Low Insertion Loss
- Excellent Isolation and VSWR
- 90° Quadrature
- Multilayered PTFE or Ceramic Construction
- Non-magnetic Products Available
- RoHS Compliant
- Tape and Reel Packaging

Applications

- W-CDMA, UMTS, WiMAX, and LTE Base Stations
- Satellite Communication
- MRI and Spectroscopy
- Combiners and Splitters
- Duplexers
- Matched Phase Shifter
- Mixers
- Modulators
- Narrow Band GPS
- Signal Distribution Nodes



HybriX® 3 dB Hybrid Couplers are made for applications which require high isolation and low insertion loss. They are surface mountable and packaged in tape and reels. HybriX® Hybrid Couplers have a small footprint, low profile, and are RoHS compliant.

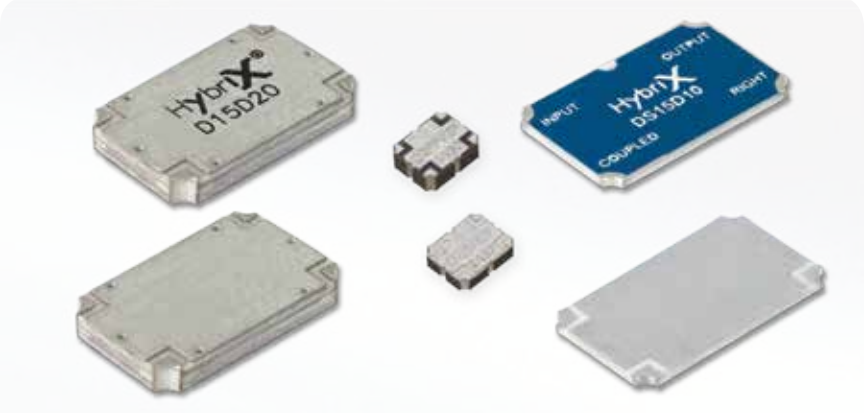
1: Power rating pertains only to HybriX® couplers. Anaren products may not be specified to handle same level of power.

Features

- Frequency Ranges up to 18 GHz.
- Surface Mountable
- Very Small Footprints (6mm x 3mm Available)
- High Power Handling
- Low Insertion Loss
- Excellent Directivity and VSWR
- Internally Terminated Models Available
- Multilayered PTFE or Ceramic Construction
- Non-magnetic Products Available
- RoHS Compliant
- Tape and Reel Packaging

Applications

- W-CDMA, UMTS, WiMAX, and LTE Base Stations
- Power Monitors
- Reflectometers
- Hybrid Amplifiers



Hybrix® Directional Couplers are made for applications which require high directivity and low insertion loss. They are surface mountable and available in tape and reel packaging. Hybrix® Directional Couplers have a small footprint, low profile, and are RoHS compliant.

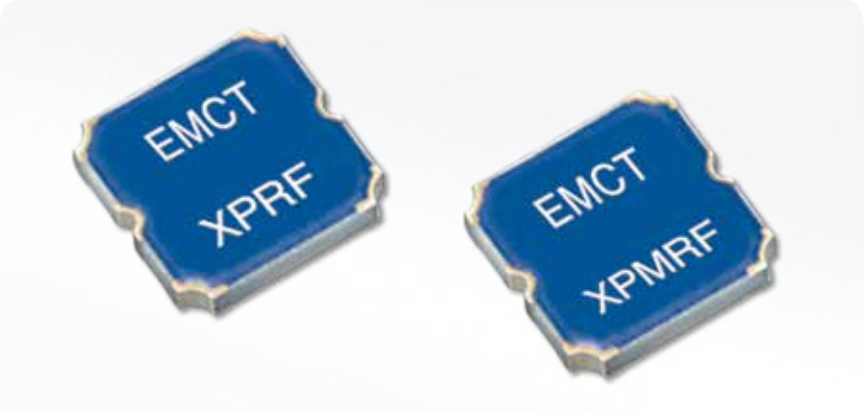
SMT Crossovers

HybriX® Signal Distribution

Features

- Excellent Wideband Performance
- Surface Mountable
- Very Low Insertion Loss
- High Power Handling
- High Isolation
- Alumina Construction
- RoHS Compliant
- Tape and Reel Packaging



Applications

- RF / DC Paths Crossing
- RF / RF Paths Crossing

A surface-mount crossover is used when a RF signal must cross a DC line or another RF transmission line. The device provides an easy-to-implement and cost-efficient alternative to RF coaxial cables and multilayer boards. SMT crossovers are packaged in tape and reel and ready for pick-and-place assembly.

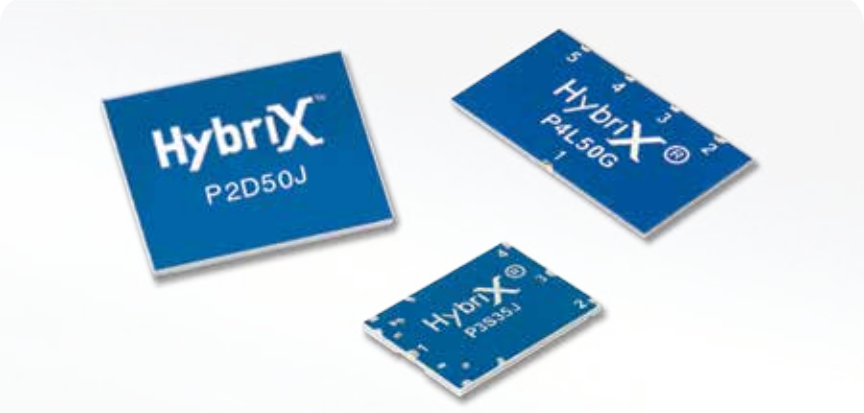
* *at 85 °C Operating Temperature*

Features

- Products available for 3G and 4G bands
- Surface Mountable
- Small Footprints
- High Power Handling
- Low Insertion Loss
- Excellent Isolation and Low VSWR
- Alumina Construction
- RoHS Compliant
- Tape and Reel Packaging



Applications

- LTE, AWS, UMTS, GSM, and PCS Base Stations
- Broadcast
- Antenna Feed Network
- Modulators
- Signal Distribution Nodes
- Combiners and Splitters

Wilkinson Power Dividers are high power in-phase devices capable of combining and dividing 2-, 3-, and 4-way signals. The devices provide excellent isolation and low VSWR in a small surface-mount package. Products are available for 3G and 4G wireless systems.

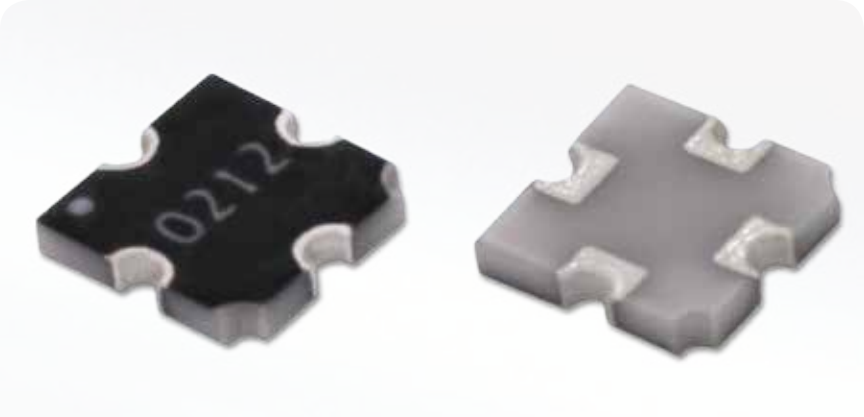
- Power Division up to 12 Ways
- Highly Repeatable Performance
- High Thermal Performance
- Robust Construction
- RoHS Compliant
- Tape and Reel Packaging



Applications

- Base Stations
- Instrumentation
- BITE
- Power Monitors
- Antenna Feed

Resistive Power Dividers provide a repeatable power dividing solution and simplifies thermal management compared to on-board design using discrete resistors. Power division up to 12 ways is available. These devices feature a robust construction on alumina substrate and are compatible with pick-and-place assembly.

Features

- Excellent Wideband Performance
- Surface Mountable
- Wide Sampling Output Range
- Optional Built-in Output Attenuator
- High Power Handling
- Alumina Construction
- RoHS Compliant
- Tape and Reel Packaging

Applications

- Base Stations
- Instrumentation
- Power Monitors
- Switch Network
- Antenna Feed

Smiths Interconnect offers high-performance power samplers in a low-profile surface mount package. Also known as resistive couplers and power tap-off, these devices are an easy-to-implement power sampling solution. Compared to on-board tap-off circuits utilizing discrete resistors, the power samplers offer many advantages including compact footprint, repeatable performance, and reduced BOM.

Smiths Interconnect has over 50 years of solution based sales and engineering. From the company's inception we have been solving customer's problems with innovative products. The many patents and protected IP have driven our company to the head of the global market place. Innovations like the Thermopad®, Diamond Rf® and HybriX® product lines are a few examples of our successes. In the following pages are new and innovative products that address today's cutting edge market needs. In listening to our customers we continue to strive for smaller package size, better performance, reduce component count, market specific products and create more cost effective solutions. Please contact us if you have a special issue that requires an engineered solution.

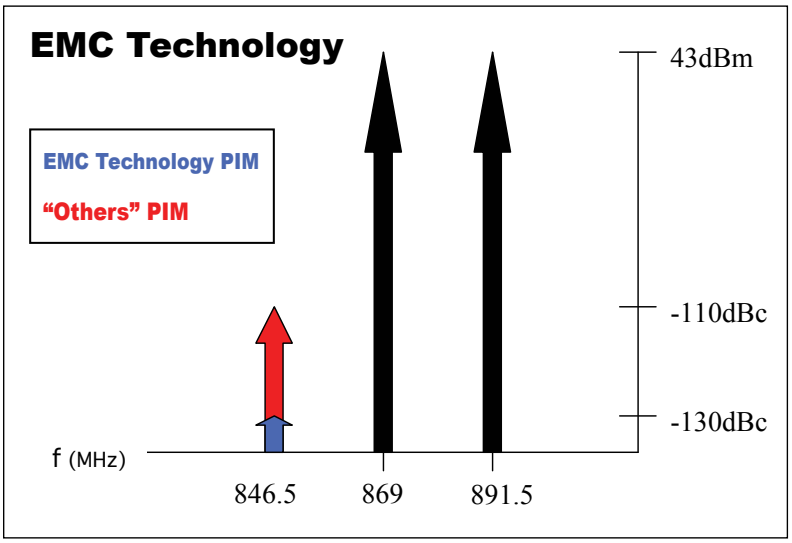
The **Only Low Passive Intermodulation** Resistive Solutions in the World



PIM matters! High PIM results in:

- Desensitized receivers
- Reduced cell capacity
- Increased inter-cell interference
- More equipment → Higher CAPEX

Low PIM solution:

- Low PIM terminations (as low as -130dBc)
- Internally tuned for excellent VSWR
- 100% PIM tested
- Drop-in replacement for common footprints
- Integrated copper heat sink
- High power handling
- Proven performance in real-world applications
- >10 dBc better than competitors' parts

Applications:

- 3G/4G Power Amplifiers
- Filters and Combiners
- Duplexers and Multiplexers
- Tower Mounted Antennas and Electronics
- Linearizing Networks
- Isolators and Circulators

LOW PIM TERMINATIONS

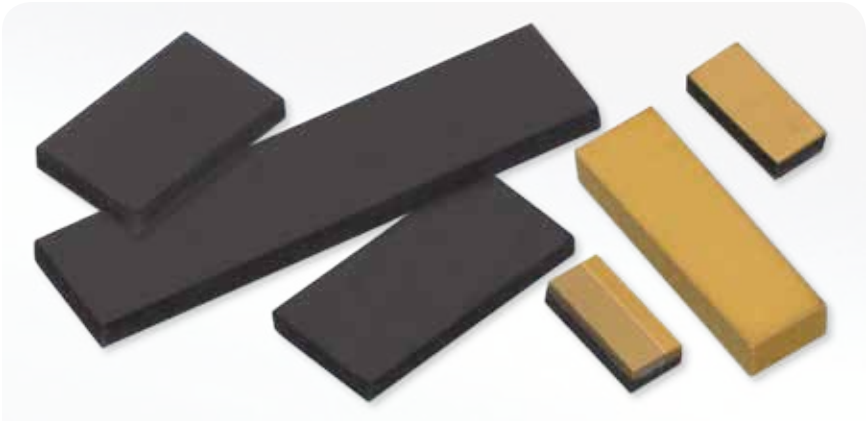
Features

- Up to 5x the thermal conductivity of conventional materials with CVD diamond
- Pt/Au or Ni/Au finishes
- Compatible with AuSn/AuGe solders
- Customizable

Applications

- GaN/GaAs RF Power Amplifiers
- DDL/DPSSL Laser Diode Arrays
- High Brightness LEDs
- High Power Switching



Smiths Interconnect Heat Spreaders are available with CVD Diamond, Aluminum Nitride or Beryllium Oxide. Standard configuration options include Electrical isolation or conduction as well as horizontal thermal bridging. Standard solderable metallization finishes of Pt/Au or Ni/Au are available. Custom designs can also be fabricated and optimized to meet specific application requirements of size, finish, and mounting configuration.

Switch Termination

Product Information

Switch terminations (sometimes referred to as 'flush mount terminations') are designed to maximize power in a small size. These devices are well suited for applications where size and weight saving are a consideration. The flush mount termination utilizes a female SMA thread for connection to circuits. The contacts are designed for repeatable and continuous connections with the circuit contact.

Specifications

Impedance	50 Ohms +/-5%
Connector	SMA Female , 3.5mm, 2.9mm
Frequency Range	DC to 18 Ghz
VSWR	1.3 Max
Power	1 to 3 Watts
Power Rating	100% @ 100°C
Derates to	0% @ 150 °C
Operating Temperature	-55 °C to 150 °C
Resistor	Thin Film
Substrate	BeO or Alumina
Body	Stainless Steel or Brass (4920)
Body Finish	Passivated or Nickel Plated (4920)
Contact	Beryllium Copper
Contact Finish	Gold

Part Numbering Code

For applications where a high power termination is required to be remotely located, the series Coaxial Remote Terminations feature integral coaxial cable inputs. They also offer ultra low VSWR. These devices decrease the number of interconnections in your system at reduced cost over a discrete cable and termination or attenuator approach.

Specifications

Resistance	50 Ohms +/-5%
Cable Length	4 to 28 inches
Power	20 to 500 Watts
Frequency Range	DC to 6 GHz
Power Rating	100% @ 100°C at the heatsink
Derates to	0% @ 150 °C
Operating Temperature	-55 °C to 150 °C
Standard Connectors	SMA and Type N*
Substrates	BeO or AlN

Pill Terminations

Stripline Pill

Our Stripline Pill Terminations are available in several different ground plane spacings and solderless construction. The resistive rod element is staked into the case forming a highly reliable compression fit. The result is a superior product which is unaffected by subsequent high temperature manufacturing processes.

Specifications

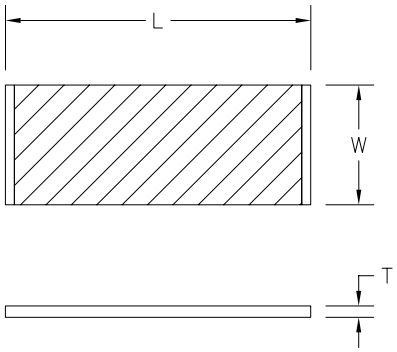
Film Cards

Waveguide Attenuator

Film Card



We offer a complete line of standard and custom wave-guide attenuator elements. Deposition of thin film metallization on a glass substrate with an optical grade finish produces an extremely stable resistive film. A protective coating is evaporated over the resistive film to prevent oxidation. Controlled processes throughout produce guaranteed repeatability.

Film cards are available in four materials: Fiberglass, Mylar®, Kapton® or Mica. They feature a surface resistance range of 25 to 1k ohm per square and power handling up to 8 watts. Applications include: Waveguide Elements, Crystal Detector Protection, Directional Coupler Termination and Mode Suppression in Cavity Filters.

Contact the Sales Department for custom design requirements.

Mylar® and Kapton® are registered trademarks of E. I. du Pont de Nemours and Company.

Notes

Additional RF Component Testing Available:

Stability of Attenuation After:
- Temperature Change
- Thermal Shock
- Vibration
- Shock
- Moisture Resistance
- Peak Power
- Salt Spray

Sensitivity of Attenuation After:
- Change in Input Power
- Change in Frequency
- Change in Temperature

Vibration and Shock Testing

Moisture Resistance

Peak Power

Salt Spray

Barometric Pressure

Outgassing

Endurance

Resistance to Bonding Exposure

Low Temperature Operation

Short Term Overload

High Temperature Exposure

Solderable Mounting Integrity

Bondable Mounting Integrity

Resistance to Solvents

Gross and Fine Leak Detection

Multipaction Testing

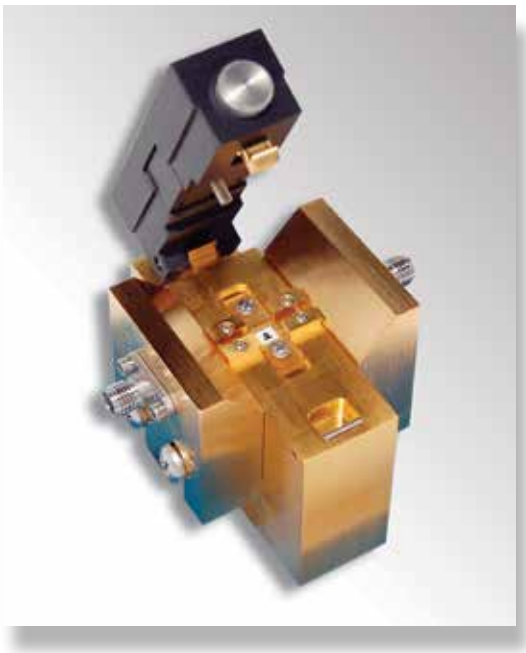
Radiographic Inspection

First Article Inspection

Pre-Cap Inspection

Source Inspection

Other testing services are available upon request.



GROUP A TESTING AND INSPECTION (100% of the lot)

Pre-cap Visual Inspection
- Conductor Metallization Defects
- Resistor Defects
- Substrate Defects
- Foreign Material

Visual Mechanical Inspection

Electrical Inspections
- Electrical Performance
- Thermal Shock
- Electrical Performance
- Burn-In [100% 168 hours at input power]
- Final RF Test
- Percent Defective Allowable (PDA)
- Temperature Coefficient of Attenuation

GROUP B TESTING AND INSPECTION (Sample)

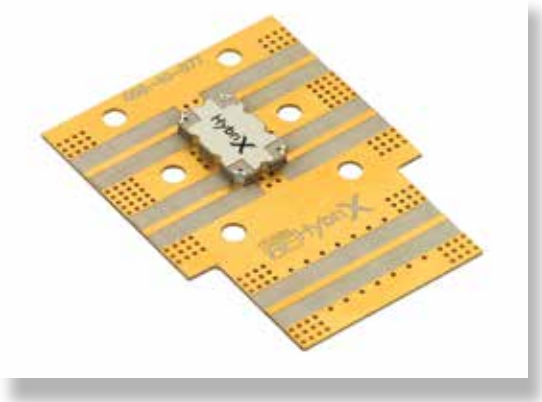
Subgroup 1 (sample)
- Low Temperature Operation
- Electrical Performance
- High Temperature Bake
- Visual Mechanical Inspection
- Electrical Performance
- Termination Adhesion (Planar, W1, W3 only)
- Bondability (WB1 and G only)
- Termination Solderability (Planar, W1, W3, T3 and T3S only)
- Terminal Lead Strength (T3 and T3S only)

Subgroup 2 (sample)
- Electrical Performance
- Life Test. Sample units for 1000 hours at the maximum input power specified
- Electrical Performance

GROUP C TESTING AND INSPECTION (Sample)

- Electrical Performance
- Load Life. Burn-in units at 125°C for duration of 1000 hours at maximum input power specified.
- Electrical Performance
- Data Review and Data Pack

Engineering Design and Product Kits



Smiths Interconnect offers Engineering Design Kits and Product Kits that are ideal for designers who need fast, convenient and accurate products for microwave circuits. Below is a list of our most popular kits. In addition evaluation boards are available for many of our products. Please contact the Sales Department if you have an application that requires a custom kit or an evaluation board.

Engineering Design Kits

TVA Kit 35 of each of 15 TVA's of various dB and TCA values
MTVA Kit 35 of each of 14 MTVA's and 2 HTVA's of various dB and TCA values
K-Band Kit 10 of each of 5 KTVA's and 11 KFA's of various dB and TCA values
TS03 Kit 25 of each of 1 to 10 dB, 12, 14, 16, 18, and 20 dB
TS05 Kit 25 of each of 1 to 10 dB, 12, 14, 16, 18, and 20 dB
TS05 Triple Wrap Kit 25 of each of 1 to 10 dB, 12, 14, 16, 18, and 20 dB
TS07 Kit 25 of each of 0 to 3, 6 and 10 dB
CVD Diamond Kit 3 of each of 12 styles of terminations and resistors
HybriX®3 Kit 10 of each of 4 styles hybrid and 4 styles directional LTCC couplers

Product Kits

TS03 Kit 5 of each of 1 to 10 dB values - planar terminal style
TS03 Triple Wrap Kit 5 of each of 1 to 10 dB values - triple wrap terminal style
TS05 Kit 5 of each of 1 to 10 dB values - planar terminal style
TS05 Triple Wrap Kit 5 of each of 1 to 10 dB values triple wrap terminal style
TS05 Triple Wrap, Solder Terminal Kit 5 of each of 1 to 10dB values - triple wrap, solder terminal style
TS05 Gold Terminal Kit 5 of each of 1 to 10 dB values - gold terminal style
TS05 Wire Bond Gold Kit 5 of each of 1 to 10 dB values - wire bond gold style
TS07 Kit 25 of each of 0, 3, 6, 10 dB values - planar terminal style
TS09 Kit 5 of each of 0, 3, 6, 10 dB - surface mount style
WTVA Kit 5 of each of 5 WTVA 2-6 dB and - 006 TCA values - wire bond gold style
WTVA Kit 5 of each of 4 WTVASMTF 3-6 dB and -007 TCA values - surface mount style

Custom Kits

AN7-Custom Kit 25 of 5 stocked AN7 Planar of customers choice
MTVAS-Custom Kit 25 of 12 stocked MTVA Planar of customers choice
MTVAW3-Custom Kit 25 of 12 stocked MTVA Triple Wrap of customers choice
TS03 Triple Wrap Custom Kit 25 of 12 stocked TS03 Triple Wrap of customers choice

Lab-Flex® Cable Assemblies to 65 GHz
FIELD PROVEN

- Low loss dielectric construction provides up to 40% less loss
- Custom braids that provide superior mechanical strength and shielding greater than 90 dB
- Stainless steel connector constructions that are also water resistant
- Wide variety of protective coverings for demanding environments
- Employs our unique Solder Sleeve connector design for superior connector retention
- Stranded center conductor version Lab-Flex®S, up to 65 GHz

Lab-Flex® AF Cable Assemblies to 40 GHz
HARSH ENVIRONMENT

- Low loss flexibles for demanding airborne, shipboard & ground-based environments
- Triple-shielded cable design protected by an abrasion resistant jacket
- Design has been tested and qualified to meet or exceed MIL-T-81490 & MIL-C-87104
- Redundant sealing system design for both cable and connectors

Lab-Flex® Q Cable Assemblies to 40 GHz
SPACE APPLICATION DESIGNS

- All assemblies meet stringent NASA outgassing requirements.
- Space Cable designs have vented connectors for Thermal Breakdown and Multipaction
- Tefzel Jacket material for maximum radiation resistance
- 78% to 83% velocity ePTFE dielectric core for low loss
- High Reliability Testing Capability

ASR Cable Assemblies to 50 GHz
For Precision Test Measurements

- High performance VNA Test Port assemblies
- ASR maintains its mechanical configuration
- ASR-F is a flexible alternative to the original ASR design
- Available with 2.4mm & 2.92mm NMD connectors
- Can be supplied individually or in phase-matched pairs

Titan-Flex™ Cable Assemblies to 18 GHz
Mechanical Strength

- Upgrade your standard RG cables with cost effective Titan-Flex™
- Robust solder termination design for superior electrical performance
- Improved mechanical strength and durability with steel center conductor
- 2 flat braids and a sinter PTFE dielectric for better crush resistance
- Fitting .141 S/R connector designs, electrical performance is consistent and optimized to 18 GHz
